

# Tech used in play

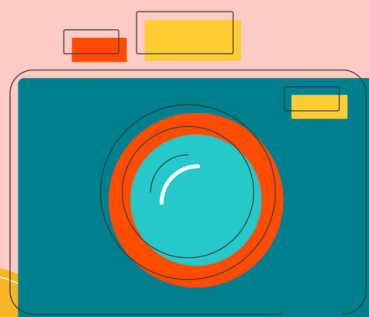

Educators can use different technologies and devices to support children's digital literacy learning

## Tablet

Use apps to create books, make digital collages or learn about the world via informative websites

## Digital Camera

Encourage children to take photos of their play and what they are learning

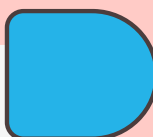

## Videos

Use children's favourite videos and TV shows to scaffold storytelling and imaginative play

## Audio recorder

Teach children to record messages for each other and play them when other children are not around

## Digital microscope

Put discoveries under microscopes, or take photos with your phone and zoom in with the pincer pinch

## Digital Play

Just like other forms of play, learning through digital play is best when supported by early childhood educators bringing their practice into the space
